Activ-Acid

Formulated Brick Cleaner

Activ-Acid is a new generation scale remover for brick, concrete and masonry surfaces. Fast and effective cleaning action, can be used as a replacement for HCl acid without danger of rust spots. Activ-Acid is the safe alternative to conventional acid cleaners. Ideal for light coloured bricks – Activ-Acid is non-fuming and only mildly irritating to skin.

Directions Use normally as for hydrochloric acid. In most cases an 8:1 dilution will give good results. Concentration can be varied to achieve best results. Always test on a small obscure area first and avoid contact with other surfaces. Windows, frames and doors should be covered with plastic sheeting to avoid damage to surfaces. Neutralise surfaces with Walltech Neutraliser after treatment.

Advantages Activ-Acid is an organic salt able to dissolve calcium deposits, without causing rust commonly associated with the use of acids that can not be readily removed by conventional brick cleaning products.
